Operational Management Software for Factory IoT

FANUC

MT-LINKi

MT-LINKi パンフレット H1-4_A
Operational Management Software for Factory IoT
What You Want on the Factory Floor

CASE.1

Make **routine operations** quicker and easier

- Create daily and monthly reports with ease
- Make equipment** checks less labor-intensive
- Go paperless for all kinds of data

CASE.2

Monitor **operations** remotely

- Be notified of alarms even when away from the factory
- Reduce total duration of brief stoppages
- Spend less time standing over equipment**

CASE.3

Analyze **operational results**

- Do more with regularly collected data
- Identify reasons for different operating rates across lines
- Aggregate operational/production results more easily

MT-LINK® can "group" multiple pieces of equipment** such as CNC machines and robot controllers into units, like process steps or lines, and represent a wide range of data visually.
MT-LINKi Makes It Possible

MT-LINKi is software that runs on computers (Server PCs and Collector PCs) and supports Connection, Collection, and Visualization throughout the factory.

- Reduced downtime (monitor operations)
- Optimized operations (understand operating rates)
- Improved production capacity (analyze operating times)
- Increased production planning accuracy (leverage operational/production results)
- Traceability (analyze causes of alarms and defective parts)
- Go paperless for data collection
- Preventive maintenance (analyze device data)

Access the Server PC (web server) using any PC or tablet with a web browser, and check equipment** status and performance.

MT-LINKi supports OPC UA and MTConnect, so it can also collect information such as operational status from PLCs that can communicate using OPC UA, or third-party CNC devices that can communicate using MTConnect.

Use an Ethernet I/O converter*** to collect the operational status of legacy models not equipped with Ethernet I/F, or devices fitted with third-party CNC models.

FANUC CNCs and robot controllers come with Ethernet I/F as standard, so they can connect to MT-LINKi straight out of the box.

* One computer can be set up as both the Server PC and the Collector PC where only a few pieces of equipment are connected.
** “Equipment” refers to devices (CNCs, robot controllers, PLCs, etc.) that MT-LINKi can monitor and collect data from.
*** A unit that converts signals from the signal lights of machine tools and other equipment so the signals can be sent over Ethernet, and notifies MT-LINKi of the operational status of the equipment. Contact our sales department for details.
What You Can Do With MT-LINK

Overview monitoring
Prepare a diagram of the factory floor and place icons to visualize the operational status of the whole factory.

Equipment monitoring
Click an icon to display operational status or alarms for groups or individual pieces of equipment.
What You Can Do With MT-LINK

Overview monitoring
Prepare a diagram of the factory/floor and place icons to visualize the operational status of the whole factory.

Equipment monitoring
Click an icon to display operational status or alarms for groups or individual pieces of equipment.

Operational results
- Operational results by group as a graph
- Detailed analysis of operational status of every device
- Output, number of production schedules, and completion rates as a graph

Signal monitoring
- Display signal status in real time
- Display can be based on preset threshold values

Signal history
- Display signal changes in collected data as a graph
- Data can be output in CSV format
Data MT-LINKi Can Collect

CNC signals

A range of data from CNCs, PMCs, servos, etc.
- CNC status signals (OP, STL, SPL, AL, EMG, CUT, SBK, etc.)
- CNC mode
- Running programs (name, comments)
- Spindle speed
- Feedrate
- Number of parts produced
- Weld time, operation time, cutting time
- User data (PMC data, macro variables)

Data for preventive maintenance
- Servo/spindle motor insulation resistance
- Servo/spindle motor temperature
- Total number of spindle rotations
- Fan replacement information (CNC control unit, amplifier, power supply)
- Number of fan rotations (CNC control unit, amplifier, power supply)
- Battery status (CNC control unit, amplifier, detector)

Robot controller signals

- Remote signals
- Operating signals
- Hold signal
- Alarm signal
- Battery abnormality signal
- Teach pendant enabled signal
- Mode
- Robot status
- Alarm status

Available data depends on model of CNC/robot, system configuration, selected options, etc. Collection of large volumes of data may affect performance. If this happens, it may be necessary to decrease the volume of data collected or the number of devices monitored.
**Supports OPC UA/MTConnect**

MT-LINKi can collect operational status data using OPC UA/MTConnect, allowing it to collect data from PLCs that can communicate using OPC UA, and from third-party CNC machine tools that can communicate using MTConnect.

**FANUC CNCs that can connect to MT-LINKi**

- Ethernet: Models marked with “✔” can have Ethernet added if they have a free NC slot. *1: Please contact our sales department.
- Embedded Ethernet: *1: Embedded Ethernet was a hardware option for the FS0j-D immediately after it was released, so some machines of this model do not have embedded Ethernet. It now comes with embedded Ethernet as standard.
- *2: Embedded Ethernet is a hardware option for FS32j-A and FS21j-B models, meaning that some machines of these models do not have embedded Ethernet.
- *3: Please check if there are free ports for embedded Ethernet and RS-232-C.
- The custom macro option is required for RS-232-C.
- (Please ask the machine-tool manufacturer to add this option.)

**FANUC robot controllers that can connect to MT-LINKi**

- Robot series R-30j/B/R-30j/B Mate
- Robot series R-30j/A/R-30j/A Mate
- Robot series R-J3j/B (7D80/45, 7D81/09, 7D82/01, and later versions)
- Robot series R-J3j/B Mate (7D91/01 and later versions)
MT-LINKi Operating Environment

Server PC (Stores collected data in a database and delivers it to a client via a web server)
