Amended : July 29, 2019

Basic Vision Leaving nature and resources to posterity

With the slogan of "Leaving nature and resources to posterity," we aim to conserve the global environment in all aspects of our corporate activities.

Action Policy

At FANUC, as an all-around manufacturer of FA (factory automation), ROBOTS, and ROBOMACHINES, we follow the action policy described below.

1. Promote the protection of our precious environment and endeavor to conserve biodiversity.
2. Fully understand the environmental aspects of our corporate activities and promote the continuous improvement of environmental conservation and the prevention of environmental pollution in order to improve environmental performance.
3. Observe all environmental legal regulations and industry standards to which we have subscribed, and any other requirements.
4. Contribute to the prevention of global warming by greenhouse-gas emissions through reducing energy consumption, particularly by reduction of electric power consumption and utilization of renewable energy.
5. Promote the minimization of input raw materials, waste reduction and recycling to make the maximum use of resources based on the concept of 4R (Refuse, Reduce, Reuse, and Recycle).
6. Strive to reduce the lifecycle-environmental-load of our products. This will require not only to make our products with less weight, less components, less energy consumption and with longer life-span, but also to promote re-use and recycle of our products.
7. Promote the improvement of chemical substance control such as reduction of harmful substances, so as to prevent environmental pollution of air, water, soil, etc.
8. Promote the efficient use and recycling of water resources.
9. Set environmental objectives and targets for the implementation of the environmental policy, review them periodically, and actively promote environmental improvement.

10. Keep all associates of FANUC and its affiliated companies well-informed of this policy and, for society, stay transparent about the relevant policy and our attitude towards any environmental issues.
